FINM3133 Time Series for Finance and Macroeconomics

Project

Due date of report: 11:59pm on 20 May 2025
Submit through iSpace (turnitin).
Note: This is a group project (at most four students per group)!

Each group will conduct the specific time series analysis and write an about 5-10-page substantial term paper on their own. You should write the results in a way that is easy-to-read, and interpret your findings clearly. In your paper, you must report the data sources clearly.

You should select a topic of your interest, collect the data by yourselves, and construct an adequate ARIMA model, and forecast future values based on the built model. Your time series analysis should follow the procedures taught in class.

Include R/Python code in your report as appendix or a separate file.

Note: Do NOT use auto.arima() to identify models.
